

Master Plan: The Futuristic City-State of Atlas (San Marino Expansion)

This document outlines the architectural and engineering synthesis of the futuristic San Marino state, integrating the specific modules and systems detailed in the provided technical sketches.

1. Architectural Landmarks

A. The Atlas Medical Research Center

Ref: *atlassketch.jpg / atlas_center_render.png*

- **Structure:** A massive "M-frame" skyscraper acting as the primary medical and scientific hub.
- **Integration:** Spans over a central canal with suspension bridges connected to the lower "Atlas" gardens.
- **Purpose:** Primary diagnostic and research facility for the 354,804 residents.

B. Soif Nante Nuclear Fusion Plant

Ref: *soifnantesketch.jpg*

- **Design:** An "E-shaped" modular facility designed for high-density energy generation.
- **Core Technology:** Utilizes the decentralized "Rubik's Cube" fusion generators.
- **Materiality:** Finished in obsidian black glass to maximize thermal insulation and aesthetic integration with the walled city.

2. Residential & Social Infrastructure

A. "Sandwich" Housing Modules

Ref: *sandwichsketch.jpg*

- **Layout:** Triangular, wedge-shaped apartment complexes arranged in circular clusters.
- **Function:** Each "wedge" is a self-contained living ecosystem with 4-6 floors, designed to be "off the ground" to preserve the natural mountain terrain.

B. The "Bag" Community Centers

Ref: *bagsketch.jpg*

- **Specifications:** 379.5m total height, featuring high-ceiling "village" environments.
- **Aesthetics:** A curved, domed structure with a "smiling" facade designed to increase maternity rates and social well-being.
- **Dimensions:** 253m-274m base width with 31.6m high ceilings for common areas.

3. Urban Layout & Logistics

Ref: town1.jpg / town2.jpg

Unit Type	Population Capacity	Count in Master Plan
Village	38 - 60 people	6 per Neighborhood
Town	29,542 people	Distributed
City (Total)	354,804 people	1 State

Connectivity

- **Primary Grid:** An octagonal layout with a central "Agriculture P" (Primary Agricultural Zone).
- **Transport:** 2W2R (2 Walls, 2 Roads) systems. Includes hyperloop tunnels (runways) and elevated pedestrian walkways.
- **Defense:** A massive perimeter wall with integrated "auto-depots" for autonomous vehicle storage and multi-leveled service buildings.

4. Energy Core: Rubik’s Cube Fusion

Ref: cubefusiongen.jpg / schematic.png

- **Fuel:** Deuterium-Tritium inlet.
- **Cooling:** Closed-loop water coolant system visible through transparent gravitic stabilizers.
- **Scale:** Modular 3x3x3 grid architecture allowing for easy maintenance and scaling within the Soif Nante facility.
